

NEXORA

Products and Services

Document ID: NX-PROD-001 **Version:** 4.1 **Publication:** February 3, 2026 **Last updated:** September 8, 2026

Department: Product **Category:** Product Catalog **Confidentiality:** Public **Applicable customers:** All

Fictional training dataset. All entities, people, locations, policies, prices and contact details are synthetic and created solely for RAG development.

Product Portfolio

Nexora's product suite is designed as a connected stack. Product-specific specifications are intentionally distributed across the product documentation, pricing, AI, security and support documents.

Nexora Cloud

The core business workspace for users, permissions, records, integrations and APIs. It is available through the web application and API.

Features

- Workspaces and teams
- Role-based permissions
- API access
- Webhooks
- Import/export
- Audit events
- Configurable authentication

Limitations

- 2 GB maximum file size on standard plans
- 120 requests/minute standard API rate
- Advanced SCIM provisioning is not available outside Enterprise

Integrations

Supports REST API, webhooks, CSV/JSON exchange and selected connector endpoints. Connector availability depends on plan.

Support

Support follows the plan matrix in the Support and SLA document.

Nexora Analytics

Analytics turns workspace activity into dashboards, scheduled reports and operational metrics.

Typical use cases

- Executive KPI reporting
- Operations monitoring

- Team activity analysis
- Scheduled weekly reports

Limitations

Real-time refresh is not guaranteed for every data source. Standard plans use scheduled refresh windows; Enterprise can negotiate shorter intervals.

Pricing reference

Analytics capabilities are bundled by plan rather than sold as a standalone seat in the standard catalog.

Nexora AI

Nexora AI provides text generation, reasoning, document analysis and vision features. Model limits and retention rules are defined in the dedicated AI documentation.

Supported models

Nexa-Text-2, Nexa-Reason-1, Nexa-Vision-1

Typical use cases

- Document summarization
- Knowledge assistants
- Classification
- Draft generation
- Structured extraction

Nexora Flow

Flow provides trigger-condition-action workflows for repetitive operational processes.

Typical use cases

- Lead routing
- Approval workflows
- Notification routing
- Scheduled data synchronization

Limitations

A workflow may contain up to 40 actions on standard plans. Enterprise agreements may increase the limit.

Nexora Secure

Secure centralizes security administration, audit events, access policy and authentication controls.

Security features

- Role-based access control
- Audit logs
- Session policies
- SSO on eligible plans

- Security event export

Plan availability

Core security controls are available across plans, while SAML SSO and advanced provisioning have plan-specific availability.

Product Relationship Map

Product	Depends on / connects to	Primary relationship
Cloud	Secure, Flow, Analytics, AI	Workspace foundation
Analytics	Cloud	Consumes operational data
AI	Cloud, Secure	Processes authorized content under AI controls
Flow	Cloud, Analytics	Triggers workflows from business events
Secure	Cloud	Governs access and security events

FAQ Highlights

Is Nexora AI the same as Nexora Cloud? No. Cloud is the workspace foundation; AI is a separate product capability with distinct context, file and rate limits.

Can Enterprise customers combine products? Yes. Enterprise agreements can bundle products and negotiate commercial or operational terms.

Does every product have the same API rate limit? No. Cloud API and AI invocation limits are documented separately.
