Support and SLA

Document ID: NX-SLA-001 **Version:** 2.1 **Publication:** July 2, 2026 **Last updated:** September 15, 2026
Department: Customer Support **Category:** Support **Confidentiality:** Public **Applicable customers:** All

Fictional training dataset. All entities, people, locations, policies, prices and contact details are synthetic and created solely for RAG development.

Support Tiers

Plan	Support channel	Coverage
Starter	Email	Business hours
Professional	Priority email	Business hours + priority queue
Business	Priority + extended support	Extended support hours
Enterprise	Dedicated support	Contract-defined coverage

Severity Definitions

Severity	Definition	Initial response	Update target
Severity 1	Complete production outage or material security incident	1 hour	Every 60 minutes
Severity 2	Major degradation with significant business impact	4 hours, support hours	Every 4 business hours
Severity 3	Limited functional issue with workaround	1 business day	As material
Severity 4	General question or low-impact defect	2 business days	As material

Severity is assigned based on business impact, not the customer's preferred priority. Support may reclassify a ticket when diagnostic information changes the impact assessment.

Uptime Commitment

99.9% monthly uptime commitment for Business and Enterprise. Starter and Professional do not receive the contractual 99.9% commitment under the standard plan terms.

Service credits, where applicable, are calculated under the plan or enterprise agreement. Credits are not automatically equivalent to cash refunds.

Enterprise Exception

Enterprise customers receive dedicated support with a 1-hour initial response target for Severity 1 incidents.

If an Enterprise order form specifies a different response target, that negotiated target controls for the covered service.

Emergency Support

Emergency support is intended for Severity 1 incidents. Customers should provide workspace ID, incident start time, affected service and a concise impact statement.

Escalation Procedure

- Confirm severity

- Open support case with evidence
- Include request IDs or incident timestamps
- Keep one incident thread for updates
- Escalate to on-call engineering when Support confirms a platform incident

Examples

A complete production outage for an Enterprise customer is Severity 1, so the standard Enterprise target is a 1-hour initial response with updates every 60 minutes. A dashboard query that is slow but has a working alternative is normally Severity 3 unless broader impact is established.
