Sales and Enterprise FAQ

Document ID: NX-SALES-001 **Version:** 3.1 **Publication:** August 12, 2026 **Last updated:** September 18, 2026

Department: Sales & Partnerships **Category:** Enterprise Sales **Confidentiality:** Internal / Customer Facing **Applicable customers:** Enterprise

Fictional training dataset. All entities, people, locations, policies, prices and contact details are synthetic and created solely for RAG development.

Enterprise Purchasing

Enterprise purchases begin with a requirements discovery covering users, products, data, security, implementation, support and commercial needs. A proposal is not binding until the appropriate agreement is executed.

Volume Discounts

Standard volume discounts begin at 250 active users and require sales approval. Larger commitments may support additional negotiated discounts, but no automatic percentage should be assumed without an approved quote.

Contract Duration

Enterprise contracts commonly use 12- or 24-month terms, but the executed order form controls the actual term.

Negotiated Pricing

Enterprise pricing is custom. Sales should not quote the public Starter, Professional or Business prices as an Enterprise final price when a negotiated quote is required.

Implementation

Enterprise implementation follows the phased model in 12_enterprise_implementation_guide.pdf. Migration assessment is required before production data migration.

Procurement and Security

Procurement may request security questionnaires, data-processing terms, payment details and legal review. Security requests are routed to Security; commercial terms are routed to Sales and Finance.

SSO and Dedicated Infrastructure

SAML SSO is available for Business and Enterprise. SCIM is Enterprise-only. Dedicated infrastructure is available by Enterprise agreement and may have a separate fee.

SLA

The standard Enterprise SLA provides a 1-hour initial response for Severity 1 incidents. If the executed order form contains a different target, the negotiated term controls.

Migration

Enterprise migration includes source inventory, mapping, validation, pilot testing and reconciliation. Production migration is not approved until the migration validation gate is completed.

Custom Integrations

Custom integrations can be scoped through implementation or professional services. API limits, security requirements and support ownership must be documented in the project scope.

Enterprise FAQ

Can an Enterprise customer get a refund after 30 days?

Possibly, if the executed agreement contains a negotiated refund provision. The standard 30-day rule does not automatically control enterprise contracts.

Does buying Enterprise automatically provide a 99.99% SLA?

No. The standard documented commitment is 99.9% for Business and Enterprise; any higher target must be explicitly negotiated.

Does a volume discount change API limits?

Not automatically. Commercial discounts and technical quotas are separate unless the order form states otherwise.
